FOR IMMEDIATE RELEASE

Region 13 (Pittsburgh) EPA/HAZMAT Exercise a Success using Tricorder Data Systems PictureXpress™

Pittsburgh, PA, (November 1, 2008) During an EPA/HAZMAT/Emergency Responder field exercise, wireless/mobile hand-held devices were used to track personnel and events in “*Real-Time*”. The Tricorder Data Systems’ (TDS) canned software, called PictureXpress™ residing on a wireless Motorola MC 9090 hand-held device performed flawlessly under extremely rough weather and field conditions while:

- Sending live data and pictures to both the “*mobile command center*” and the *Fayette County Command* approximately 45-miles away
- Scanning ID badges to verify personnel and personnel capabilities/certifications from across several independently maintained county databases (Fayette, Somerset and Westmoreland)
- Tracking personnel moving from the *staging area* into the HAZMAT *hot-zone*
- Tracking personnel exiting from the *hot-zone* into the decontamination station and back to the staging area.

As a result remote HAZMAT team leaders benefited from the ability to real-time manage personnel in a critical situation.

The TDS PictureXpress™ software is a National Institute of Standard and Technology (NIST) Federal Information Processing Standards (FIPS) 140-2 compliant wireless technology capable of communicating in real-time over virtually any wireless medium. PictureXpress™ is a commercial off the shelf (COTS) compliant application and runs on either Microsoft Mobile 5.0 or 6.0 compatible devices.

TDS is partnered with Sypherlink LLC, known for combining and managing information from many different database sources. This is a notable feature differentiating TDS from all other Emergency Responder-DHS communication technologies. This capability allows different databases to exchange information seamlessly on an “as-needed” basis to insure data delivered to the field is current and accurate.

###

About Tricorder Data Systems (TDS) (www.tricordersystems.com) Tricorder creates products and services that provide real-time secure mobile computing solutions, and is a wholly owned subsidiary of Waterfront Technologies located in Baltimore MD. Waterfront Technologies has been serving large federal and state government agencies and a slew of private sector clients. TDS products and services are designed to cater to handheld devices, cell phones, smart phones, laptops and embedded systems.

About Sypherlink, Inc. (www.sypherlink.com) Sypherlink is an information-management-software company that intelligently links critical information across disparate data sources. The company’s client/partner base includes global 1,000 organizations, government agencies, and leading systems integrators and application/tool providers.
